## *Enhancement of cyber educational system of Montenegro*

### **Dissemination 2 , Chamber of Economy of Montenegro, September 17, 2014**

Development of IT education, identification of the existing problems and new opportunities offered by ICT to meet the curriculum challenges in the coming period – these were the main topics at the round table »IT education in Montenegro« held at the Chamber of Economy of Montenegro on 17 September 2014.

The goal of the roundtable was to point at the importance of knowledge and skills in a modern society. The opportunities offered by the online environment, in terms of the: availability of large amounts of information, knowledge and the ability of interactive learning, are essential for the improvement of the education system. Montenegro has adopted the Strategy for Information Society Development 2012 - 2016, which has set the education of population as one of its goals. The education system will have the key role in this process. In that respect, according to the Strategy on the introduction of ICT in the Education System of Montenegro, the efforts have been made to introduce ICT into all levels of our education system.

PhD Ramo Sendelj from the University of Donja Gorica, has stated that Montenegrin universities want and try to reach the European level when it comes to information technology. He has presented the TEMPUS project (ECESM) on cyber security, which is implemented in the partnership with the leading European universities.

According to him, cyber security is not just a problem of ICT, but it also has sociological and commercial aspects.

- The three main objectives of this project are: to raise public awareness about what kind of threats the application of ICT technologies brings, to organize specialized trainings for employees of the companies that are holders of critical infrastructure and to establish an organized system of education at the highest level of education which will enable a continuous education process of personnel – Mr Sendelj has explained. His speech was followed by the discussion of participants.
