MCEC activities: New projects

IPA projects

We are pleased to announce that IMTM have different roles at new IPA Europe/Aid/136938/ID/ACT/ME projects – as coordinator at one, and as partner at the other project.

The participation in these projects will significantly enhance ECESM project sustainability, as MCEC will be the **hub of training and workshop organization related to security issues in both, medical information systems and cloud based solutions.**

IMTM, as coordinator at project ref. no. CFCU/MNE/010: *„Modern technology development for Health Information System in Montenegro”*, must provide adequate education and

organize workshops about security of health-care information systems. The prospect of storing health information in electronic form raises concerns about patient privacy and data security. Any attempt to introduce computerised health-care information systems should guarantee adequate protection of the confidentiality and integrity of patient information. At the same time, the patient information also needs to be readily available to all authorised health-care providers, in order to ensure the proper treatment of the patient. The planned trainings should provide solutions to overcome the security problems.

The other project, ref. no. CFCU/MNE/015, titled *“Market oriented research on SME perspective about cloud computing solutions in ME”*, analyze possibilities of use cloud systems in regular business activities in SME in order to reduce its expenditures. The protection of confidential and sensitive information in cloud is very complex. As partner institution, IMTM should provide

trainings to enclose and inform managers how they can control or restrict end user access to data in cloud.

Erasmus+ project

IMTM is partner on Erasmus+ project „***Enhancement of study programs in Public Health Law, Health Management, Health Economics and Health Informatics in Montenegro – PH ELIM***”.

PH-ELIM project is focused on development of ICT enhanced methodological approach in public-health education, which includes evidence-based approach through innovative National Platform for Public Health Education and Research in ME, which presents unique opportunity to learn from the system similar to one existing at national level, thus making students able to significantly contribute to improvements and innovations at national level, as well as being competitive at international level.

The project implementation will start on 1st November 2016, and the coordinator of PH-ELIM project is University of Donja Gorica.
